Tyler Crabtree

CS460
Project 1

Descritption:
I converted xv6 to implement a ps system call.

Files:
1. Working Version -> has all xv6 (ensures it will run)
2. Gold -> has files I modified (however, I had trouble copying only those files over to a
   new xv6 to run, hence why I attached a whole version just in case)
3. ExampleRun-> video showing the program functioning
4. Part-1 -> description of part 1
5. Readme -> This file.

Notes:
I ran my code on a Linux Mint Machine
